

Post COVID-19 Check-ups Don't let your guard down

Hospiten's post COVID-19 check-up includes a comprehensive set of diagnostic tests performed in a single day.

You will have a report on your state of health after COVID-19, prevent complications and start the most appropriate treatment for possible side effects.

Why is this check-up important?

It is important to monitor the health of all those who have overcome COVID-19, since even some asymptomatic patients have suffered complications afterwards. There have been cases of patients having effects of the virus that were not initially evident, and without a general check-up, they would not have been detected in time.

Who should have the check-up?

It is always advisable to consult a specialist after going through COVID-19, especially if you have cardiovascular, pulmonary or hematological risk factors, or other symptoms like tiredness, fatigue, chest pain or palpitations.

Young people without risk factors and who have suffered mild, or even asymptomatic COVID-19, may also develop some symptoms that must be monitored.

Medical tests included:

- Comprehensive assessment by an Internal Medicine specialist
- Study by means of questionnaires and scales to estimate psychological sphere, physical capacity and persistent symptoms
- Weight, Height, BMI, Blood Pressure and oxygen saturation by pulse oximetry
- Electrocardiography
- Spirometry
- PA chest X-ray
- HRCT chest
- Echocardiography
- Blood and urine tests
- Serology to determine immunity status against SARS-CoV-2 viruses
- Complete report with risk assessment, treatment guidelines and follow-up
